

Basic Climatological Station Metadata
Current status

Metadata compiled: 28 JUL 2025

Station: ROSS (THE BOULEVARDS)

Bureau of Meteorology station number: 093053
Bureau of Meteorology district name: Midlands
State: TAS

World Meteorological Organization number: 94985
Identification: NO ID

Network Classification:
Station purpose: Synoptic
Automatic Weather Station:

Current Station Location				
Latitude	Decimal	-42.0250	Hour Min Sec	42°1'30"S
Longitude	Decimal	147.4954	Hour Min Sec	147°29'43"E
Station Height	186 m	Barometer Height		
Method of station geographic positioning			Unknown	

Year opened: 1993
Status: Open

Station summary

No summary for this site has been written as yet.

Historical metadata for this site has not been quality controlled for accuracy and completeness. Data other than current station information, particularly earlier than 1998, should be considered accordingly. Information may not be complete, as backfilling of historical data is incomplete.

Observation summary

The table below indicates the approximate completeness of the record for individual element types within the Australian Data Archive for Meteorology. For elements not listed see the note below.

DAILY DATA HOLDINGS

OBSERVATION TYPE	FIRST MONTH	LAST MONTH	COMPLETENESS (% estimate)	SINGLE DAYS MISSED	FULL MONTHS MISSED
EVAPORATION	OCT 1997	JUN 2025	94.9	452	2
EVAPORIMETER - MAXIMUM WATER TEMPERATURE	OCT 1997	OCT 2009	96.6	150	0
MAXIMUM AIR TEMPERATURE	OCT 1993	JUN 2025	99.2	91	0
WIND RUN BELOW 10 FEET	OCT 1997	JUN 2025	96.3	186	6
RAINFALL	OCT 1993	JUL 2025	99	N/A	N/A

Historical metadata for this site has not been quality controlled for accuracy and completeness. Data other than current station information, particularly earlier than 1998, should be considered accordingly. Information may not be complete, as backfilling of historical data is incomplete.

						Metadata compiled:	28 JUL 2025

RAINFALL INTENSITY DATA HOLDINGS

THERE ARE NO ONE-MINUTE DATA HOLDINGS

THERE ARE NO HALF-HOURLY DATA HOLDINGS

THERE ARE NO UPPER-AIR EDT DATA HOLDINGS

Holdings calculated up to 01 Jul 2025

The % complete figure is the completeness of observations averaged over all months of record, for the given station and observation type, taking gaps into account. For hourly holdings, the completeness is relative to the maximum number of daily observations for the site each month, and is therefore an estimate. For daily holdings, the completeness figure shown is exact.

The single days missed figure is the total number of days for which no observation was received, not including full missed months. The full months missed figure is the total of full month gaps over the period of record. Where an element is not included assumptions can generally be made about availability, and the list to use has been suggested below.

Unlisted element	Listed element to use
Minimum air temperature	Maximum air temperature
Wet bulb temperature	Dew point
Soil temperature at 20, 50 & 100cm	10cm soil temperature
Relative humidity	Dew point
Minimum temp. of water in evaporimeter	Evaporimeter - max water temp
Visual observations eg. weather, visibility	Total cloud amount
Sea related observations	Sea state

Station Equipment History

Equipment Install/Remove

Cloud Height (No Electronic History)

Humidity (No Electronic History)

Pressure Trend (No Electronic History)

Lightning (No Electronic History)

Sea Surface Temperature (No Electronic History)

Magnetic Bearing (No Electronic History)

Wind Direction

07/JUN/2007 INSTALL Anemometer (Type Davis Weather Wizard S/N - NONE) Surface Observations

01/OCT/1993 INSTALL Anemometer (Type Dwyer on mast S/N - Unknown) Surface Observations

01/OCT/1993 INSTALL Anemometer (Type Wind Vane S/N - NONE) Surface Observations

04/SEP/2000 INSTALL Mast Anemometer (Type Telescopic, Gal, 9m, Guyed S/N - NONE) Infrastructure

21/OCT/1997 INSTALL Wind Run Anemometer (Type Synchrotac S/N - 538) Surface Observations

10/OCT/2018 REMOVE Anemometer (Type Davis Weather Wizard S/N - NONE) Surface Observations

21/OCT/1997 REMOVE Anemometer (Type Dwyer on mast S/N - Unknown) Surface Observations

12/OCT/2009 REPLACE Wind Run Anemometer (Now Synchrotac S/N - 803) Surface Observations

22/OCT/2008 REPLACE Wind Run Anemometer (Now Synchrotac S/N - CBM803) Surface Observations

Wet Bulb Temperature

01/OCT/1993 INSTALL Thermometer, Mercury, Wet Bulb (Type Dobbie S/N - M3047) Surface Observations

18/JAN/2000 REPLACE Thermometer, Mercury, Wet Bulb (Now Dobbie S/N - 12943) Surface Observations

29/JAN/1997 REPLACE Thermometer, Mercury, Wet Bulb (Now Dobbie S/N - 12943) Surface Observations

21/OCT/1997 REPLACE Thermometer, Mercury, Wet Bulb (Now Dobbie S/N - M3047) Surface Observations

Solar Radiation (Long Wave) (No Electronic History)

Spectral Radiation (No Electronic History)

Maximum Temperature

01/OCT/1993 INSTALL Thermometer, Mercury, Max (Type Dobbie S/N - 4640) Surface Observations

27/JAN/2016 REPLACE Thermometer, Mercury, Max (Now Dobbie S/N - 22007) Surface Observations

21/OCT/1997 REPLACE Thermometer, Mercury, Max (Now Dobbie S/N - CBM4640) Surface Observations

Soil Temperature 10cm

21/OCT/1997 INSTALL Thermometer, Soil, 10cm (Type Dobros S/N - CBM641) Surface Observations

09/NOV/1998 REPLACE Thermometer, Soil, 10cm (Now Dobros S/N - 9725431) Surface Observations

07/JUL/2020 REPLACE Thermometer, Soil, 10cm (Now Dobros S/N - 9725433) Surface Observations

24/AUG/2017 REPLACE Thermometer, Soil, 10cm (Now Dobros S/N - 9725439) Surface Observations

Soil Temperature 20cm

21/OCT/1997 INSTALL Thermometer, Soil, 20cm (Type Dobros S/N - 9604849) Surface Observations

11/MAR/2021 REMOVE Thermometer, Soil, 20cm (Type Amarol S/N - 9984019) Surface Observations

07/JUL/2020 REPLACE Thermometer, Soil, 20cm (Now Amarol S/N - 9984019) Surface Observations

09/NOV/1998 REPLACE Thermometer, Soil, 20cm (Now Dobros S/N - 9725411) Surface Observations

Soil Temperature 50cm

21/OCT/1997 INSTALL Thermometer, Soil, 50cm (Type Dobros S/N - 9564470) Surface Observations

Snow Height (No Electronic History)

Soil Temperature 100cm (No Electronic History)

Sunshine Hours (No Electronic History)

Wind Run

Station Equipment History (continued)

Equipment Install/Remove(Continued)

21/OCT/1997 REMOVE Anemometer (Type Dwyer on mast S/N - Unknown) Surface Observations
12/OCT/2009 REPLACE Wind Run Anemometer (Now Synchrotac S/N - 803) Surface Observations
22/OCT/2008 REPLACE Wind Run Anemometer (Now Synchrotac S/N - CBM803) Surface Observations

Air Temperature

01/OCT/1993 INSTALL Thermometer, Mercury, Dry Bulb (Type Dobbie S/N - M0834) Surface Observations
21/OCT/1997 REPLACE Thermometer, Mercury, Dry Bulb (Now Dobbie S/N - M0834) Surface Observations

Surface Inclination (No Electronic History)

The following table summarises information on field performance checks available electronically over the period indicated. The number of instances an instrument was found to fail field performance checks should only be used as a guide. A system of data quality flags is implemented by the Bureau of Meteorology to indicate the data quality of an observation as determined by a mutli-stage quality control process.

Available Date Range	Element	Fail Field Performance Check
15/OCT/1998 - 21/FEB/2020	Wind Direction	1
18/JAN/2000 - 11/MAR/2021	Wet Bulb Temperature	0
15/OCT/1998 - 11/MAR/2021	Maximum Temperature	0
15/OCT/1998 - 21/FEB/2020	Soil Temperature 10cm	0
15/OCT/1998 - 21/FEB/2020	Soil Temperature 20cm	0
15/OCT/1998 - 21/FEB/2020	Soil Temperature 50cm	0
15/OCT/1998 - 24/AUG/2017	Wind Run	0
15/OCT/1998 - 11/MAR/2021	Minimum Temperature	1
25/JAN/2001 - 21/FEB/2020	Evaporation	0
05/MAY/1998 - 11/MAR/2021	Rainfall	4
15/OCT/1998 - 21/FEB/2020	Wind Speed	1
15/OCT/1998 - 11/MAR/2021	Air Temperature	0

Historical metadata for this site has not been quality controlled for accuracy and completeness. Data other than current station information, particularly earlier than 1998, should be considered accordingly. Information may not be complete, as backfilling of historical data is incomplete.

Notes on these metadata

The following notes have been compiled to assist with interpreting the metadata provided in this document. These notes are subject to change as the network evolves. Changes in station-specific metadata occur more frequently, both as recent changes are recorded and historical information is transferred from paper file to electronic database.

Reliability of the metadata

The Commonwealth Bureau of Meteorology maintains information on more than 20,000 stations which have operated since observations began in the mid 1800s. The amount of information available for each of these sites and its associated uncertainty are influenced by a number of factors including the type and purpose of the station and the time over which it operated.

Early information about stations was held only on paper file. In 1998 a corporate electronic database was established to help maintain information about the network and its components. The number of parameters recorded about a station is now much greater than before this database was established. The national database has also helped improve consistency in the metadata through the implementation of predefined fields. As a result, and through the refinement of operating procedures, station metadata recorded since 1998 are of a higher overall standard than previously, although occasional omissions and errors are still possible.

The Bureau is part way through a task of entering historical information held on paper file into the corporate database. **Until this process is completed there will remain large gaps in the information contained in these metadata documents and considerable caution should be used when deriving conclusions from the metadata.** As an example, two consecutive entries about a rain gauge dated 50 years apart may appear in the equipment metadata. This may either mean that nothing happened to that instrument over the 50 years, or that information for the intervening period has yet to be entered into the database. Similarly, if no information was available about instruments at a site when it was first established, fields which were required to have a value present may have used the earliest information available as a best-guess estimate. Sometimes this was the metadata current when the database was established in 1998. In some instances there may be gaps in metadata relevant to the post 1998 period.

For the above reasons it is recommended that all metadata prior to 1998 be considered as indicative only, and used with caution, unless it has been quality controlled. The Bureau of Meteorology should be contacted if further information or confirmation of the data is required. Depending on the nature of the inquiry there may be a fee associated with this request. Contact details are provided in the telephone book for each capital city or the Bureau's web site at:
<http://www.bom.gov.au>

The following pages contain explanatory notes for selected terms found in this document.

Station Number

The Bureau of Meteorology station number uniquely specifies a station and is not intended to change over time, although on very rare occasions a station number may change or be deleted from the record (usually to correct an error). Generally a new station number is established if an existing station changes in a way that would affect the climate data record for that site (measured in terms of air temperature and precipitation). Significant station moves are an example of this.

Some stations also possess a World Meteorological Organization (WMO) station number. The WMO number is different to the Bureau of Meteorology number. It also uniquely specifies a station at any given time but can be reassigned to another station if the new station takes priority in the global reporting network. Only selected stations will have a WMO number. Significant stations may maintain their WMO number for many decades.

Historical metadata for this site has not been quality controlled for accuracy and completeness. Data other than current station information, particularly earlier than 1998, should be considered accordingly. Information may not be complete, as backfilling of historical data is incomplete.

Notes on these metadata

Network Classification Continued....

Stations may be included in several different networks, which may change over time. The table on the previous page lists current network classifications related to the scientific purpose of the network. Some of these networks - the GCOS network for instance - are components of a global network. Entries in the database for some networks may not be complete, thus not properly representing the status of the network. The composition of the network will usually change over time. While several of the networks have international significance, other network classifications have been developed to aid operational management.

Station Purpose

The station purpose can be classified according to the observation program listed below. Parameters in brackets list some of the various different configurations which occur.

- Synoptic [Seasonal, River Height, Climatological, Telegraphic Rain, Aeronautical, Upper Air]
- Climatological [Seasonal, Telegraphic Rain]
- Aeronautical
- Rainfall [River Height]
- River Height
- Telegraphic Rain [Non-Telegraphic River Height, Telegraphic River Height]
- Non-Telegraphic Rain [Telegraphic River Height]
- Evaporation [Rainfall, River Height, Telegraphic River Height, Non-Telegraphic River Height, Telegraphic Rain, Non-Telegraphic Rain]
- Pluviograph [Rainfall, Telegraphic Rain, Non-Telegraphic Rain, River Height, Telegraphic River Height, Non-Telegraphic River Height]
- Radiation
- Lightning Flash Counter
- Public Information
- Local Conditions
- Radar Site
- Unclassified
- No Routine Observations

Note: Telegraphic observations are those which are sent by some electronic means be it a phone or telegram to the responsible Bureau office. It is a term which is historically linked to analogue non automatic data transmission.

Station Observation Program Summary

Surface Observations

The following terms are used to describe the frequency of surface observations at a site. Historical observation programs will typically be missing for many sites until the database is backfilled with information.

Set a)

- Continuous Program
 - More than half hourly observations sent (eg an automatic weather station {AWS} which continuously transmits 10 minute observations). This will automatically include half hourly and hourly observations programs.
- Half hourly observations
 - Half hourly observations sent. This will automatically include hourly observations.
- Hourly observations
 - Hourly observations sent only. Stations report on non-synoptic hours (ie. 0100, 0200, 0400, 0500, etc)

Historical metadata for this site has not been quality controlled for accuracy and completeness. Data other than current station information, particularly earlier than 1998, should be considered accordingly. Information may not be complete, as backfilling of historical data is incomplete.

Notes on these metadata

Surface observations continued....

Set b)

- Performed
 - Observations performed, instruments read and observations recorded
- Reported
 - Observations performed, instruments read and reported real time
- Seasonal
 - The program may only be performed during a defined season (such as Fire Weather observations) or the routine program may increase in reporting frequency and/or parameters. The program dates are currently modified at the start and end of each season for stations performing seasonal observations. Historically this was not always the case.

Current Station Equipment Summary

Equipment listed in this metadata product is catalogued under one of systems listed below, appropriate to its application. The "Infrastructure" category has been included since it contains information about the mast height of an anemometer (if present).

- Flood Warning
- Infrastructure
- Radiation
- Rainfall Intensity
- Surface Observations
- Upper Air
- Weather Watch {RADAR}

Station Equipment History

Equipment Install/Remove

One of four types of actions can be performed on an instrument in this listing:

Install - A new instrument is installed at the site. This can be either a completely new addition (eg the first barometer at the site), or the replacement of an existing instrument with a different type (eg replacing mercury barometer with electronic barometer)

Remove - An instrument can be removed either when it is no longer necessary to measure a particular element, or when the element is to be measured by an instrument of a different type (see under "Install" above)

Replace - This occurs when one instrument is replaced with another of the same type (eg Kew pattern mercury barometer replacing another Kew pattern mercury barometer)

Share - The same instrument is used for observations under two (or more) systems (eg a rain gauge may be used within both Surface Observations and Rainfall Intensity systems)

Unshare - The instrument is no longer shared between systems

Historical metadata for this site has not been quality controlled for accuracy and completeness. Data other than current station information, particularly earlier than 1998, should be considered accordingly. Information may not be complete, as backfilling of historical data is incomplete.

Notes on these metadata

Calibration

During a site inspection an instrument will be calibrated as either being within or not within the specified tolerance in accuracy.

Where a quantitative calibration result can be achieved by comparison to a transfer standard (eg barometer comparisons and tipping bucket rain gauge calibrations), the instrument will be recorded as being within or outside the required tolerance. Instruments (such as 203mm rain gauges, screens and evaporation pans) where quantitative calibrations cannot be derived should be regarded as meeting specifications when the instrument is in 'good working order'.

This product provides a summary table of the number of times an instrument was found to be out of calibration

Station Detail Changes

This set of metadata indicates when some aspect of the general information about a station has changed.

- STATION

Metadata which are categorised as pertaining to STATION are items of (textual) information describing a specific attribute of the station. A reference to (nondB seeding) indicates initial information of this field has been sourced from a previous database.

Station position

- Latitude and longitude

Derivation of station latitude and longitude, defined by the location of the rain gauge when it is present, has changed over time. Current practice is to locate or verify open and operational station latitude and longitude based on Global Positioning System equipment. Methods used to locate a station as described in this product (latlon_deriv) are as follows: GPS, MAP 1:10000, MAP 1:12500, MAP 1:25000, MAP 1:50000, MAP 1:100000, MAP 1:250000, SURVEY, and Unknown (which is more commonly represented by a null value). The field latlon_error should be used with caution as the method of determining this value has been interpreted in different ways over time.

- Height

Determination of heights for observing sites is by survey where possible. Otherwise height may be determined using a Digital Aneroid Barometer and a known surveyed point, or derived from map contours. The source of height is provided in the corresponding parameter with a suffix of "_deriv".

Heights which may appear in these metadata are:

- aero_ht
 - The official elevation of the aerodrome which normally corresponds to the altitude of the highest threshold of the runways at that airport;
- bar_ht
 - this represents the height of the mercury barometer cistern or the digital aneroid barometer above mean sea level (MSL);
- stn_ht
 - this normally represents the height of the rain gauge above MSL

Historical metadata for this site has not been quality controlled for accuracy and completeness. Data other than current station information, particularly earlier than 1998, should be considered accordingly. Information may not be complete, as backfilling of historical data is incomplete.

Prepared by the Bureau of Meteorology.

Station metadata is compiled for a range of internal purposes and varies in quality and completeness. The Bureau cannot provide any warranty nor accept any liability for this information. © Copyright Commonwealth of Australia 2025, Bureau of Meteorology.

Notes on these metadata

- Land Use

To assist the long term understanding of climate change it is important to be able to determine the differences over time which are attributed to variations in the climate. Since land use has an effect on the micro climate around the site, and changes in land use will therefore affect the climate record, it is important that the characteristics of the site are monitored. Soil types are recorded as they affect the land use and also add to the knowledge of the site details.

Defined Land use Types.

- Non-vegetated (barren, desert)
- Coastal or Island
- Forest
- Open farmland, grassland or tundra
- Small town, less than 1000 population
- Town 1000 to 10,000 population
- City area with buildings less than 10 metres (3 stories)
- City area with buildings greater than 10 metres (3 stories)
- Airport

The land use code is entered on the station inspection form in the ranges 0 to 100 m, 100 to 1 km and 1km to 10 km; ie:

- lu_0_100m: Land Use 0 to 100 metres from the enclosure
- lu_100m_1km: Land Use 100 metres to 1 kilometre
- lu_1km_10km: Land Use 1 kilometre to 10 kilometres

Defined Soil Type (At Enclosure).

- unable to determine
- sand
- black soil
- clay
- rock
- red soil
- other

Surface Type (At Enclosure).

- unable to determine
- fully covered by grass
- mostly covered by grass
- partly covered by grass
- bare ground
- sand
- concrete
- asphalt
- rock
- other
